

Taok3 is temporally coherent but sensitive to CpG weighting and replicate noise

d Why Taok3 remains a hypothesis, not a mechanism

Strength

detrended $r = 0.968$; first-difference $r = 0.971$

Fragility

weighted $q = 0.038$, but unweighted global $q > 0.05$

Replication

WGBS profile reliability $r = 0.343$

Annotation

validated transcripts encode the same protein;
a methylation-start-site route is untested
